INCLUSION CRITERION

- The People section of the SDF controls who is included in the website, using two criterion:
 - Included or excluded
 - Deceased or living (determined solely by TMG Living flag)
- Note: New SDFs by default exclude living persons
- So people are sorted into one of four categories
 - Included and Deceased
 - Excluded and Deceased
 - Included and Living
 - Excluded and Living

CONTROLLING WHO IS INCLUDED/EXCLUDED

- The People section has a Exclude Living checkbox which, if checked, excludes living persons from being included (defined as having a person page) in the site.
- Include/Exclude based on custom TMG flag.
- Or combine both methods listed above. If combining these options, a person must pass **both** filters to be included.

CONTROLLING DETAILS FOR DECEASED/LIVING

- The Limit Details for Living People checkbox will hide details for living people being included in the website.
- You can also hide details for people based on a TMG Flag setting.
- Or combine both methods to get these results:
 - Details are not limited based on Deceased / Living
 - Details are suppressed for Living people
 - Details are suppressed for Living people and for some other people
 - Details are suppressed for selected people only

DETAIL FILTER BY GROUPS

- The previous slide showed people divided into four groups (Included Deceased, Included Living, Excluded Deceased, Excluded Living)
- For each group, it is possible to further control what details are published for that group, using the group filter panel shown on next slide. This gives you finer control over what data appears on your website.
